## ABSTRACT

Described in the present invention are a sulfonyl derivative represented by the following formula (I):

$$Q^{1}-Q^{2}-T^{1}-Q^{3}-SO_{2}-Q^{A}$$
 (I)

5

10

[wherein Q<sup>1</sup> represents a saturated or unsaturated 5- or 6-membered cyclic hydrocarbon group, 5- or 6-membered heterocyclic group, dicyclic fused ring or tricyclic fused ring group which may have a substituent;

 $Q^2$  represents a single bond, an oxygen atom, a sulfur atom, a linear or branched  $C_{1-6}$  alkylene group or the like;

Q<sup>A</sup> represents an arylalkenyl group which may have a substituent or a heteroarylalkenyl group which may have a substituent; and

T<sup>1</sup> represents a carbonyl group or the like] and a

15 medicament comprising the same. The compound has strong

FXa inhibitory action, provides prompt, sufficient and

long-lasting anti-thrombus effects when orally

administered, and has low side effects and is therefore

useful as an excellent anticoagulant.
